J. R. EYERMAN

Practicing a dig, a Viking lander at the Jet Propulsion Laboratory (above) extends its surface sampler over simulated Martian rocks—Styrofoam—to scoop simulated Martian soil—earth sand.

In this manner, technicians rehearsed operations on earth before Viking performed them on Mars.

In addition to the biology instrument and two cameras, the jeep-size lander carries other devices (below) to sample weather, analyze soil and atmosphere, and record any seismic tremors.

Data from the tests are stored on magnetic tape, then transmitted to the orbiter for relay to earth.
